

"Timing Health Helps"

- **Driving Drug & Healthcare**

Costs Down, Compassion and Quality UP

"Medication-delayed is healthcare-denied."

"Needed Medication and Healthcare When Needed."

The Timing Health Mission is patented to:

"Globally enable patients to have their next needed medications and next needed healthcare when needed."

Timing Health can help more readily address low-risk changes in chronic health conditions before those changes become higher-risk and higher-cost.

Timing Health can more often enable New-Meds to be started and new healthcare to happen without delay as prescribed by patients own clinicians.

Timing Health is first to uniquely widely distribute Clinician-Controlled low-risk expedited medications and healthcare combined through patented technology.

Timing Health enhanced ecommerce technology, Timing Depots and Timing Health Clinics scalable devices, located near and increasingly far from home, help make New-Meds and New-Healthcare more immediately accessible and affordable.

The result is GPA. Greater Patient Pharmacy Provider Autonomy is a Clinician-Controlled value based expenditure that is safe, effective and economically more valuable enabled by patented Timing Health medication and healthcare distribution”.

Timing goals include better “Continuity of Care” by enabling the “healthcare tetrad” of providers, payers and patients with greater medication precision, convenience and monitoring.

GPA "greater patient, pharmacy provider autonomy" can help all healthcare systems

Half of Americans cannot afford a \$500 medical bill that readily is incurred for an Urgent Care or ER visit today for treating mild hyperglycemia or a sinus infection.

Especially for a diabetic who may too often procrastinate or cannot easily get to those facilities, or reach immediately their own Clinicians.

Clinicians who today without their own Timing Health Clinics cannot adequately cover low-risk health concerns before those escalate 24/7.

Timing Health expects over the next 10 years for the United States over 250 M people will have one chronic condition.

Over 160 M will have two; and over 80 M will have three chronic health conditions for Clinicians to manage.

Status quo manpower models cannot meet the demand or will push Clinician reimbursement dramatically lower.

Timing Health helps address these issues head-on for Clinicians, Patients and Payers.

"Timing is Overcoming Costly Delays in Healthcare"

"Timing can help Decelerate Chronic Conditions"

"Privacy Information Ownership HIPAA GDPR are paramount unlike other Big Tech Companies"

"Timing is helping patients with chronic conditions and others over the low-risk, high cost hurdles of the status healthcare delivery systems"

"Otherwise the status quo could soon bankrupt Medicare, others National Health System and explode those nation's debt or rising mortality and morbidity"

A Singular Innovative Patented Medications Management Solution

First to have Global Impact in the Past Century by incrementally enabling GPA greater patient autonomy.

•

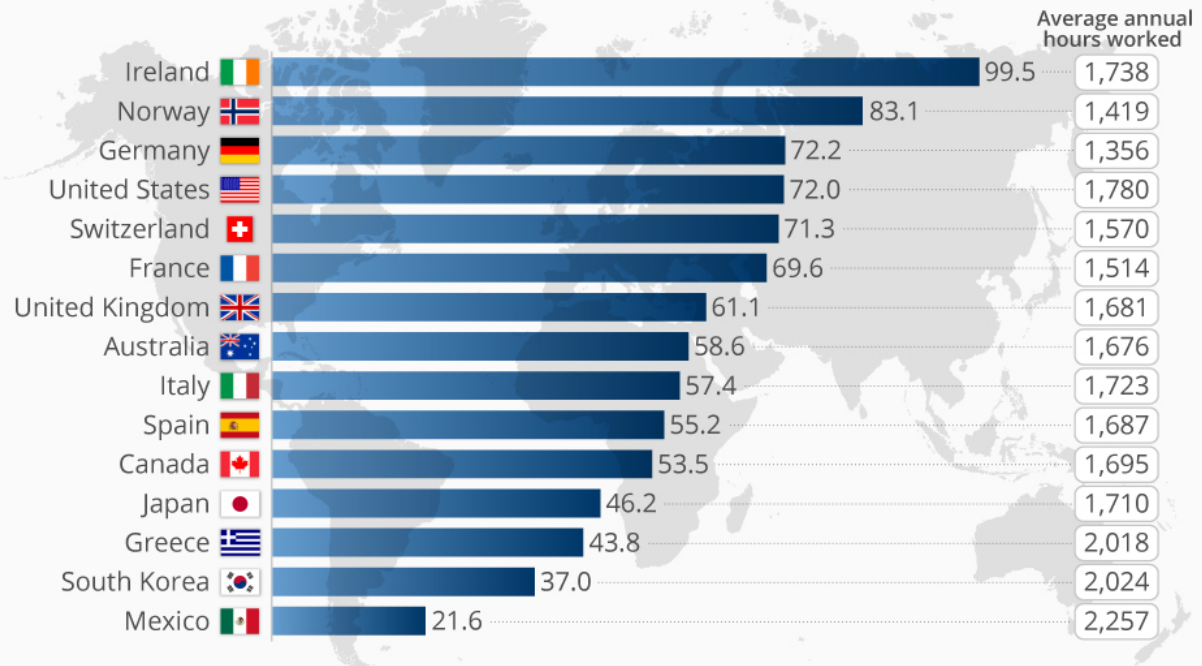

Timing Health can improve routine healthcare for chronic conditions outcomes by improving healthcare outcomes up to 30% over 5 years and co-related longevity outcomes for patients and providers in accord with their compliance to unknown logically lower or higher degrees

•

TIMING HEALTH HELPS PRODUCTIVITY

Where Labor Productivity Is Highest

GDP per hour worked across the total economy in 2017 (U.S. dollars)*
